Designated according to The Construction Products (Amendment etc.) (EU Exit) Regulations 2020

UK Technical Assessment	UKTA-0836-22/6149 of 11/07/2022
Technical Assessment Body issuing the UK Technical Assessment:	British Board of Agrément
Trade name of the construction product:	JORDAHL anchor channel JTA and JXA
Product family to which the construction product belongs:	Anchor channels
Manufacturer:	PohlCon GmbH Nobelstrasse 51 12057 Berlin Germany
Manufacturing plant(s):	PohlCon GmbH Industriestrasse 5 14959 Trebbin Germany
This UK Technical Assessment contains:	50 pages including 3 annexes which form an integral part of this assessment
This UK Technical Assessment is issued in accordance with The Construction Products (Amendment etc.) (EU Exit) Regulations 2020 on the basis of:	EAD 330008-03-0601, Edition 03/2021 *Anchor channels*

1 Technical description of the product

The JORDAHL anchor channel JTA and JXA is system consisting of C-shaped channel profile steel and stainless steel and at least two metal anchors non-detachably fixed on the channel back and channel bolts.

The anchor channel is embedded surface-flush in the concrete.

Channel bolts JORDAHL T-bolts with appropriate hexagon nuts and washers are fixed to the channel.

The product full description is given in Annex A.

2 Specification of the intended use(s) in accordance with the applicable UK Assessment Document (hereinafter UKAD)

The performances given in Section 3 are only valid if the anchor channel is used in compliance with the specifications and conditions given in Annex B.

The verifications and assessment methods on which this European Technical Assessment is based lead to the assumption of a working life of the anchor channel of at least 50 years. The indications given on the working life cannot be interpreted as a guarantee given by the producer but are to be regarded only as a means for choosing the right products in relation to the expected economically reasonable working life of the works.

3 Performance of the product and references to the methods used for its assessment

3.1 Mechanical resistance and stability (BWR 1)

Essential characteristic	Performance
Characteristic resistance under tension load (static and quasi-static loading)	
- Resistance to steel failure of anchors, connection, and channel lips	See Annex C1 to C3
- Resistance to steel failure of channel bolt	See Annex C6
- Resistance to steel failure by exceeding the bending strength of the channel	See Annex A9, A10 and C4 to C5
- Maximum installation torque	See Annex B5 and B6
- Resistance to pull-out failure of the anchor and to concrete cone failure	See Annex B3, B4 and C7 to C9
- Minimum edge distance, spacing and member thickness	See Annex A9, A10, B3 and B4
- Characteristic edge distance and spacing to avoid splitting of concrete under load	See Annex C7 to C9
- Resistance to blow-out failure – bearing area of anchor head	See Annex A7 and A8
Characteristic resistance under shear load (static and quasi-static loading)	
- Resistance to steel failure of channel bolt	See Annex C16
- Resistance to steel failure of channel lips, connection, and anchor (shear load perpendicular to longitudinal axis of channel)	See Annex C11 to C13
- Resistance to steel failure of channel lips, anchor, and connection (shear load in direction of longitudinal axis of channel)	See Annex C12

Essential characteristic	Performance
- Resistance to concrete failure	See Annex C14 and C15
Characteristic resistance under combined tension and shear load (static and quasi-static load)	See Annex C18
Characteristic resistances under cyclic fatigue tension load	See Annex C22 and C23
Displacements (static and quasi-static load)	See Annex C10 and C17

3.2 Safety in case of fire (BWR 2)

Essential characteristic	Performance
Reaction to fire	Class A1
Resistance to fire	See Annex C19 to C21

3.3 Health, hygiene, and the environment (BWR 3)

Not relevant

3.4 Safety and accessibility in use (BWR 4)

Not relevant

3.5 Protection against noise (BWR 5)

Not relevant

3.6 Energy economy and heat retention (BWR 6)

Not relevant

3.7 Sustainable use of natural resources (BWR 7)

No performance assessed.

3.8 Other essential characteristics

Essential characteristic	Performance
Durability	See Annex B1

4 Assessment and verification of constancy of performance (hereinafter AVCP) system applied

4.1 System of assessment and verification of constancy of performance

According to UKAD No. 330008-03-0601 and Annex V of the Construction Products Regulation (Regulation (EU) 305/2011 as brought into UK law and amended, the system to be applied is: 1.

5 Technical details necessary for the implementation of the AVCP system, as provided for in the applicable UKAD

Technical details necessary for the implementation of the AVCP system are laid down in the control plan deposited with Deutsches Institut für Bautechnik.

5.1 UKCA marking for the product/ system must contain the following information:

- Identification number of the Approved Body
- Name/address of the manufacturer of the product/ system
- Marking with intention of clarification of intended use
- Date of marking
- Number of certificate of constancy of performance
- UKTA number.

On behalf of the British Board of Agrément 	
Date of Issue: 11 July 2022	**Hardy Giesler** Chief Executive Officer

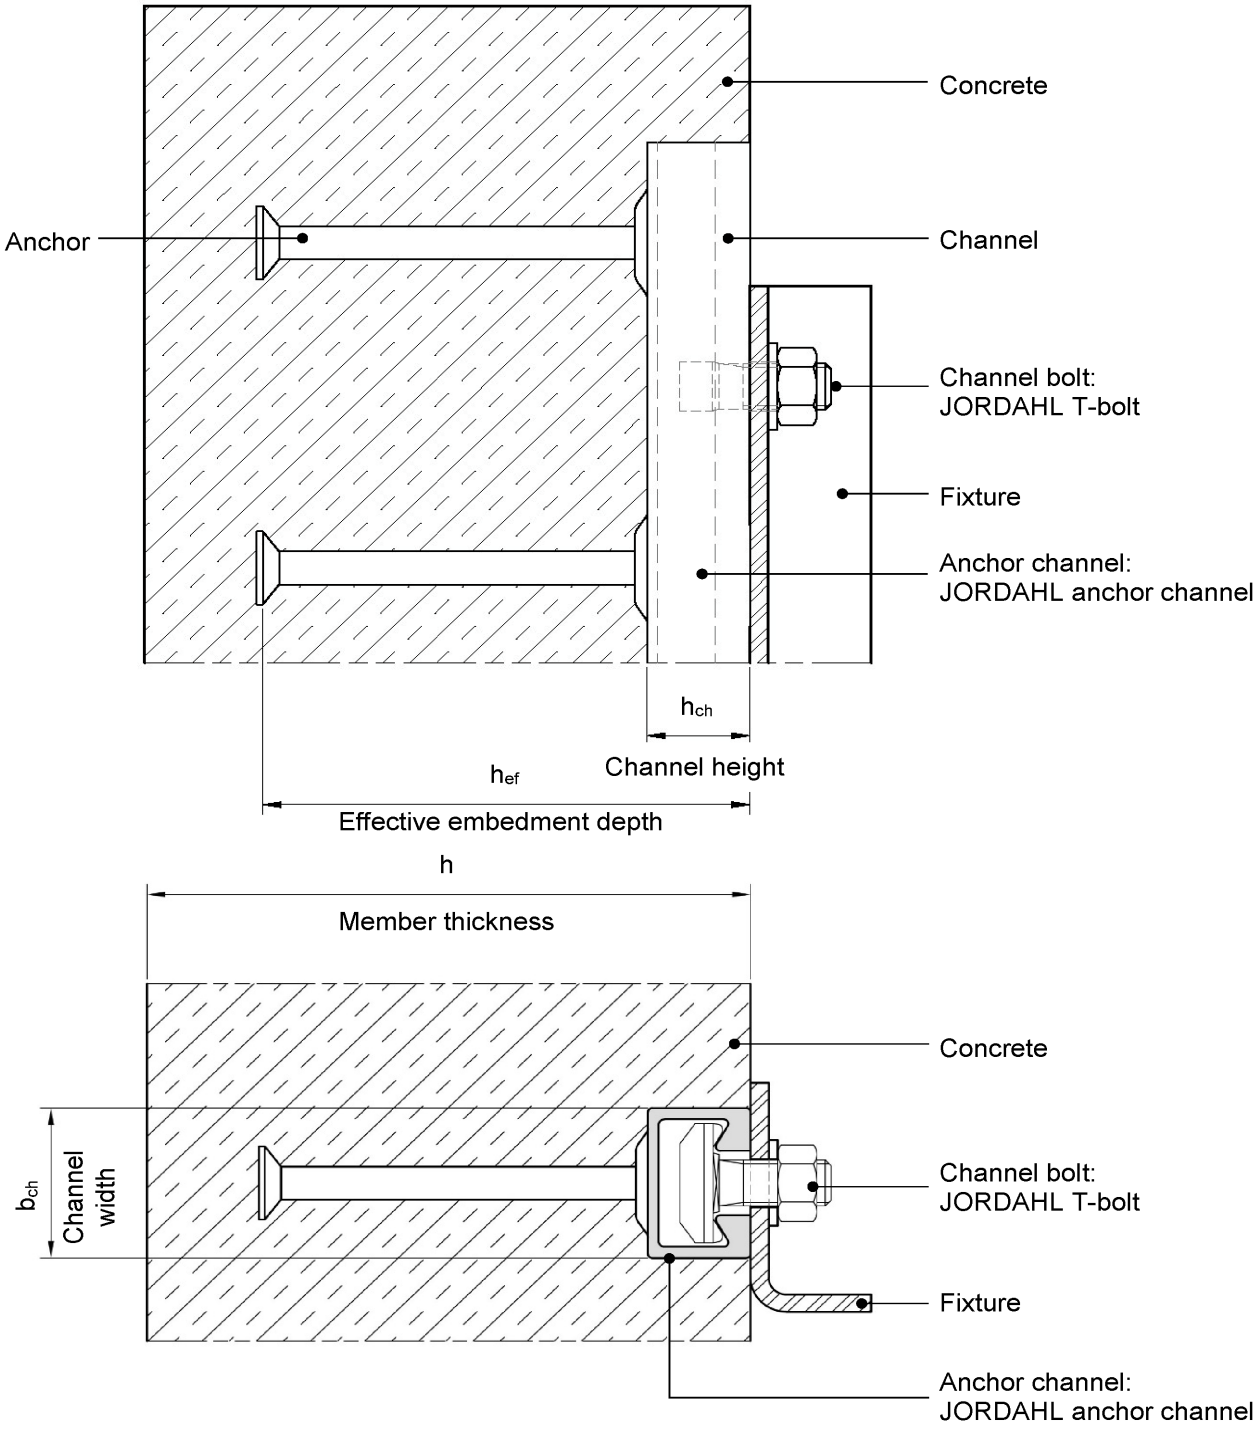
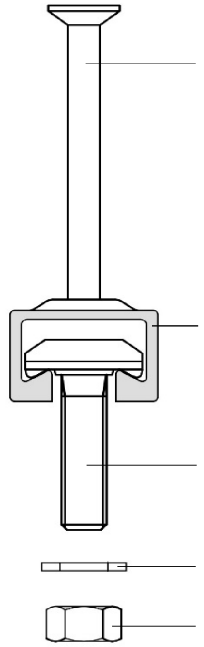
ANNEXES

These annexes apply to the product described in the main body of the UK Technical Assessment.

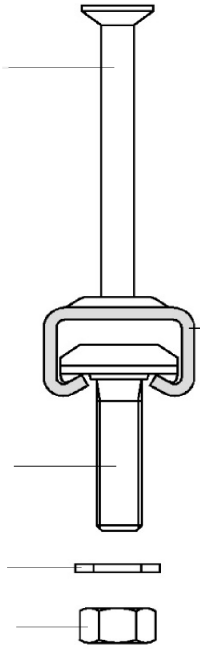


JORDAHL anchor channel JTA and JXA	
Product description Installed condition	**Annex A1**

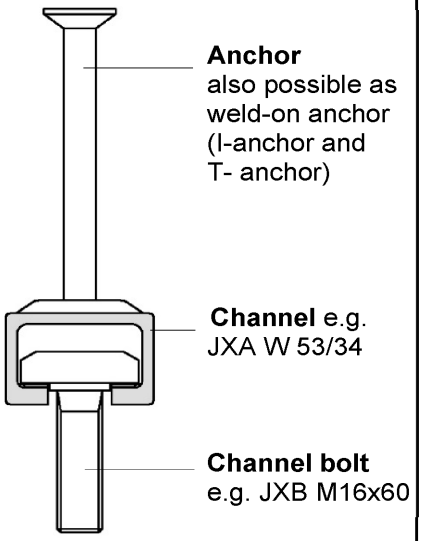
JORDAHL anchor channel JTA with W profile



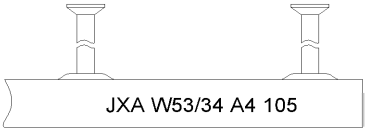
JORDAHL anchor channel JTA with K profile



JORDAHL anchor channel JXA with serrated W profile



Example of marking of the JORDAHL anchor channels JTA and JXA: e.g. JXA W53/34 A4



J or JORDAHL	= Identifying mark of the manufacturer
JXA W	= Anchor channel type
53/34	= Size
A4	= Material
105	= Embedment depth if $h_{ef} > h_{ef,min}$

Material channels:

Carbon steel

No marking	= Hot-dip galvanized

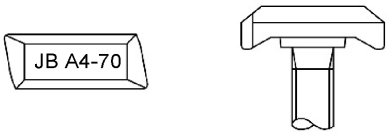
Stainless steel

A2	= CRC II [1)]
A4, L4	= CRC III [1)]
F4, FA	= CRC III [1)]
HCR	= CRC IV, V [1)]

[1)] Corrosion resistance class

Close to the anchors a nail hole is positioned

Example of marking of the JORDAHL T-bolt: e.g. JB A4-70



J or JORDAHL	= Identifying mark of the manufacturer
JB	= Channel bolt type
A4	= Material
70	= Strength grade

Material bolts:

Carbon steel

No marking	= Hot-dip galvanized
G	= Electroplated

Stainless steel

A2	= CRCII [1)]
A4, L4	= CRCIII [1)]
F4, FA	= CRC III [1)]
HCR	= CRC IV,V [1)]

Strength grade bolts:

Carbon steel

4.6, 8.8	Strength grade 4.6, 8.8

Stainless steel

50, 70	Strength grade 50, 70

JORDAHL anchor channel JTA and JXA

JORDAHL anchor channel JTA and JXA

Product description
Types of channel bolts – material

Annex A12

Specifications of intended use

Anchor channels and channel bolts subject to:

- Static and quasi-static loads in tension as well as shear perpendicular to the longitudinal axis of the channel and shear in the direction of the longitudinal axis of the channel.
- Fatigue cyclic tension loading.
- Fire exposure for concrete class C20/25 to C50/60.

Base materials:

- Reinforced or unreinforced normal weight concrete according to BS EN 206-1: 2013 + A2: 2021
- Strength classes C12/15 to C90/105 according to BS EN 206-1: 2013 + A2: 2021
- Cracked or uncracked concrete

Service conditions (environmental conditions):

- Structures subject to dry internal conditions
  (anchor channels and channel bolts according to Annex A3 and A4, Table A1, column 1 – 5).
- Structures subject to internal conditions with usual humidity (e.g., kitchen, bath and laundry in residential buildings, exceptional permanent damp conditions and applications under water)
  (anchor channels and channel bolts according to Annex A3 and A4, Table A1, column 2 – 5).
- According to BS EN 1993-1-4: 2006 + A2: 2020 relating to corrosion resistance class CRC III
  (anchor channels and channel bolts according to Annex A4, Table A1, column 3 – 5)
- According to BS EN 1993-1-4: 2006 + A2: 2020 relating to corrosion resistance class CRC IV
  (anchor channels and channel bolts according to Annex A4, Table A1, column 4 – 5)
- According to BS EN 1993-1-4: 2006 + A2: 2020 relating to corrosion resistance class CRC V
  (anchor channels and channel bolts according to Annex A4, Table A1, column 5)

Design:

- Anchor channels are designed under the responsibility on an engineer experienced in anchorages and concrete work
- Verifiable calculation notes and drawings are prepared taking account of the loads to be anchored. The position of the anchor channel and channel bolts are indicated on the design drawings (e.g., position of the anchor channel relative to the reinforcement or to supports).
- For static and quasi-static loading as well as fire exposure the anchor channels are designed in accordance with EOTA TR 047 *Design of Anchor Channels*, March 2018, or BS EN 1992-4: 2018.
- For fatigue loading the anchor channels are designed in accordance with EOTA TR 050, October 2018 *Calculation Method for the performance of Anchor Channels under Fatigue Loading*, November 2015.
- The characteristic resistances are calculated with the minimum effective embedment depth.

JORDAHL anchor channel JTA and JXA	**Annex B1**
Intended use Specifications	

Installation:

- The installation of anchor channels is carried out by appropriately qualified personnel under the supervision of the person responsible for the technical matters on site.
- Use of the anchor channels only as supplied by the manufacturer – without any manipulations, repositioning or exchanging of channel components.
- Cutting of anchor channels is allowed only if pieces according to Annex A9, Table A6 and Annex A10, Table A7 are generated including end spacing and minimum channel length and only to be used in dry internal conditions (Annex A3 and A4, Table A1, column 1). For anchor channels made of stainless steel there are no restrictions regarding corrosion resistance when using cut channel pieces, if cutting is done professionally and contamination of cutting edges with corroding material is avoided.
- Installation in accordance with the installation instructions given in Annexes B8 and B9
- The anchor channels are fixed on the formwork, reinforcement or auxiliary construction such that no movement of the channels will occur during the time of laying the reinforcement and of placing and compacting the concrete.
- The concrete under the head of the anchors is properly compacted. The channels are protected from penetration of concrete into the internal space of the channel.
- Washer may be chosen according to Annex A3 and provided separately by the user.
- Orientating the channel bolt (groove according to Annex A11) perpendicular to the channel axis.
- The required installation torques given in Annex B5 and B6 must be applied and must not be exceeded.

[5] Product not available

JORDAHL anchor channel JTA and JXA	**Annex B6**
Intended use Installation parameters of channel bolts (for JXA)	

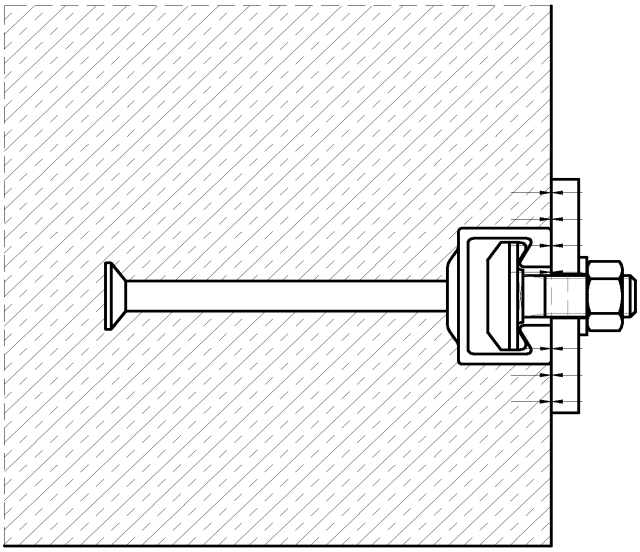

Fig. 1

General:

The fixture is in contact with the channel profile and the concrete surface. The installation torques according to Annex B5, Table B4 and Annex B6, Table B5 shall be applied and must not be exceeded.

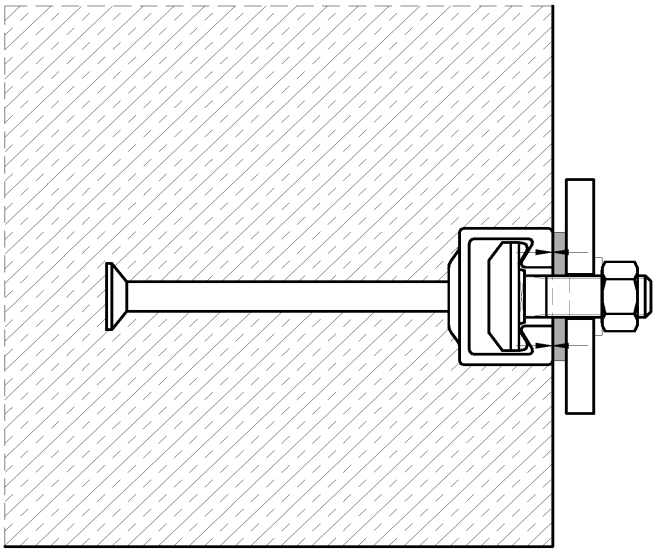

Fig. 2

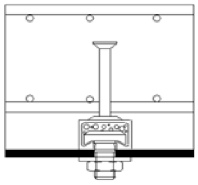
Steel-steel contact:

The fixture is not in contact with the concrete surface. The fixture is fastened to the anchor channel by suitable steel part (e.g. washer). The installation torques according to Annex B5, Table B4 and Annex B6, Table B5 shall be applied and must not be exceeded.

JORDAHL anchor channel JTA and JXA	**Annex B7**
Intended use Position of the fixture	

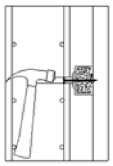
1. Fixing anchor channel

Install the channel surface flush and fix the channel undisplaceable to the formwork or to the reinforcement.



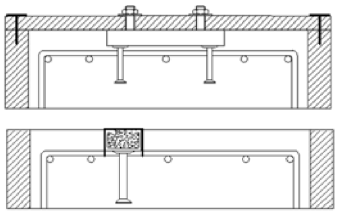
a) Fixing to steel formwork
With JORDAHL T-bolts and nuts, with rivets, cramps or with magnet fixings.

or



b) Fixing to timber formwork
With nails through the pre punched holes in the back of the channels and with staples.

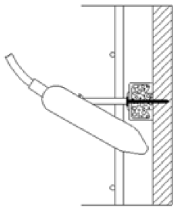
or



c) Fixing to anchor channels at the top
- To timber batten on the side formwork (e.g. with JORDAHL T-bolts).
- Fixing from above directly to the reinforcement or to a mounting rebar, attach the channel by wire binding.

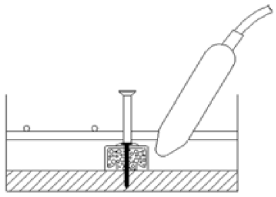
2. Pouring concrete and regular compacting of concrete

Compact the concrete properly around the channel and the anchors.



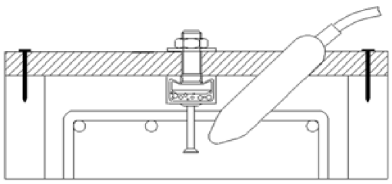
a) at side of member

or



b) at bottom of member

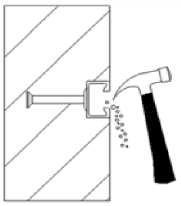
or



c) at top of member

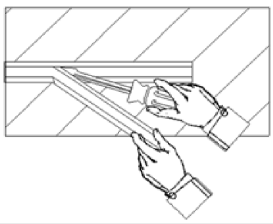
3. Removing of the infill

Clean the channel on the outside after removing the formwork



a) PS foam infill
With a hammer or a hook.

or



b) PE foam infill
By hand or with help of a screw driver in one piece.

JORDAHL anchor channel JTA and JXA	**Annex B8**
Intended use Installation instruction anchor channels	

4. Fastening the JORDAHL T-bolt to the JORDAHL anchor channel

Fig. 1

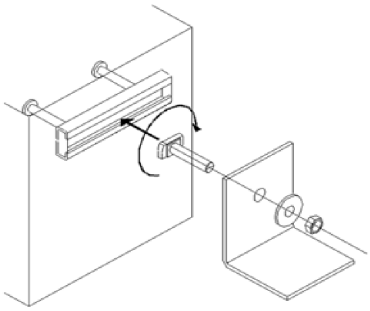


Fig. 2

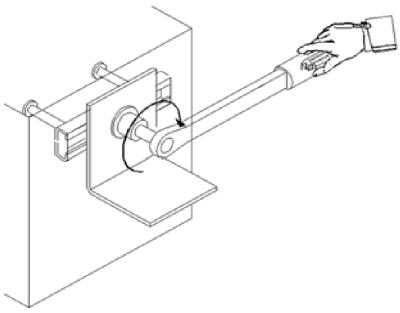

a) Installation torques (general)

1. Insert the JORDAHL T-bolt into the channel slot at any point along the channel length (Fig. 1).
2. Turn the channel bolt 90° clockwise and the head of the channel bolt locks into position (Fig. 1).
3. Do not mount the channel bolt at the end of the channel within the end spacing x according to Annex A9 and A10.
4. Use the washer under the nut (Fig. 1).
5. Check the correct fit of the channel bolt.
   The groove on the shank end of the channel bolt must be perpendicular to the channel longitudinal axis.
6. Tighten the nuts to the installation torque according to Table 1 (Fig. 2). The installation torque must not be exceeded.

Table 1 – Installation torques (general)

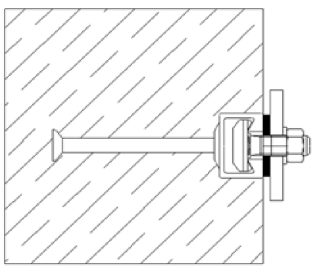
or

Fig. 3



b) Installation torques (steel-steel contact)

1. Use washers between the channel and the fixture to create a defined contact.
2. Tighten the nuts to the installation torque according to Table 2. The installation torque must not be exceeded.

Table 2 – Installation torques (steel-steel contact)
